Dear Valued Customer,

Please find enclosed your 2010 Certificate of Lamp Recycling, an illustration of your contribution to a global effort to properly manage mercury bearing waste and divert it from landfill. Aevitas Inc. continues to lead the way in lamp recycling in Canada having recycled over 7.5 million units last year alone.

This past year has been challenging for most of us to try to negotiate through the tail end of a recession. Our company has maintained an emphasis on developing and refining processes that are focused on recycling and diversion from landfill. Our goal is to produce materials that are autonomous and clean thus making them eligible to be forwarded directly to a downstream manufacturing or processing facility. Of course, we support local Canadian manufacturing facilities as often as possible.

The Canadian recycling industry continues to grow by expanding into areas that were unimaginable even ten years ago. New products and uses for recycled plastics, paint, glass and oil help to deliver a promising boost to the local manufacturing sector. Of course, this upward trend originates with a responsible decision to recycle.

We are excited about this coming year with expansion plans in the works at several of our processing facilities. We are currently employing over one hundred and twenty Canadians and expect to increase this number by thirty per cent by the end of the year. Ongoing efforts are driven towards improving customer service and efficiency, which should translate into cost reductions that will ultimately produce a lower price point to you, our customer.

As environmental regulations change and as our valuable natural resources decline, our company will remain dedicated to finding sustainable solutions in the recycling industry while being responsible and respectful towards our environment. Ultimately, it remains our goal to continue to be a Canadian leader in this industry.

We remain thankful and appreciative of your decision to allow us to manage your waste.

Sincerely,

Tom Maxwell,
Aevitas Inc.

The latin term "Aevitas" represents perpetuity or "of a lifetime", which ties to the common thread that many of our unique services stand behind; recycling. By extending the lifetime of materials through recycling, we can minimize our environmental footprint and create a responsible outlook for the environment that our children will endure.
